Business Analyst

Business Analysis

Draw.io

Figma Tool

Microsoft Vision

INTRODUCTION

- Introduction to Business Analysis
- Importance of Effective Business Analysis
- Roles and Responsibilities of BA Skills requirements for the role
- Importance of BA in the industry
- Business Analyst Career Path
- Job Openings in the Market

PROJECT VS PRODUCT

- What is a Project
- what is a Product
- Project Team Vs Product Team
- Business Analyst in the Project Team
- Business Analyst in the Product Team

IT PROJECTS FOR BA

Types of Software Projects:

- Fixed
- Migration
- Customization
- Maintenance & Incremental
- IT Implementation

IT Deployment Environments:

- Feature
- Development
- QA
- UAT
- Production

SDLC

(SOFTWARE DEVELOPMENT LIFE CYCLE)

- What is SDLC and its life cycle flow
- Process of SDLC
- Models of SDLC
- More useful methodologies in SDLC

TOOLS INTRO

- Project Management Tools
- Wireframe and Prototype Tools
- Documentation Tools
- Generic Software's
- Internal Portals

KNOWLEDGE AREA

- Objective
- Need
- Scope
- Business Case
- As Is -To Be Process
- Analysis Techniques
 - a. SWOT
 - b. MoSCoW
 - c. MOST
 - d. CATWOE

DOMAIN KNOWLEDGE

- Types of Domains
- Importance of the Domain Knowledge
- Learning techniques for New Domains
- How to learn and perform on brand new

STAKEHOLDER/CLIENTS

- Who are they
- Importance of Stakeholders
- Identify the Domain Knowledge/SME level Internal and External Stakeholders
- How will connect with them as a BA
- Communicate/Collaborate as a BA

REQUIREMENTS

- What is a Requirement?
- Importance of Requirements for IT Projects
- Importance of Requirements for a BA
- Types of Requirements:
 - Business
 - Architecture
 - Solution Analysis
 - Data Requirements
 - Stakeholder/SME
 - Transition/KT/Demo
 - Non-Functional

MANAGE REQUIREMENTS

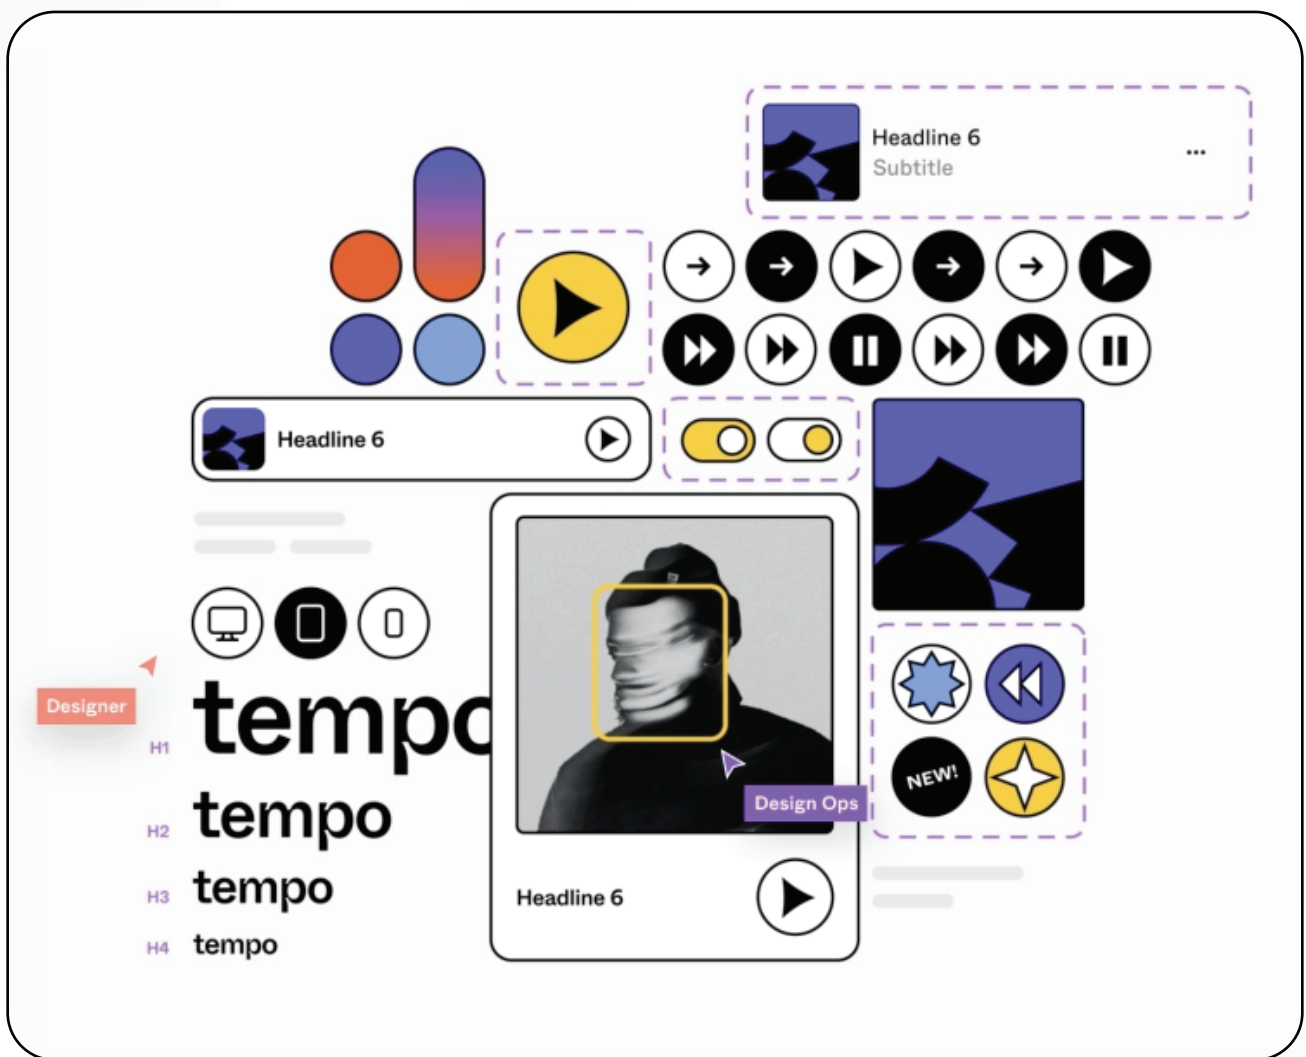

- Requirement Elicitation
- Prepare for Requirement elicitation techniques
- Brainstorming
- Document Analysis
- Focus Group
- Interface Analysis
- Interviews
- Observation
- Prototyping
- Workshops/JAD Stakeholder Collaboration
Document the Results UML Diagrams

ANALYSIS OF REQUIREMENTS

- What is Requirements Analysis
- The Business Analyst Tasks in RA
- Prioritize Requirements
- Coordinating with product team
- Confirming with the Stakeholders
- Specify the Mode of Requirements
- Define in-scope, out-of scope & assumptions
- Final Validating for Requirements Formal documents and mail to stakeholders/clients/product team

FIGMA

FIGMA for UX/UI designers is a powerful collaborative interface design tool. You can design stunning apps, blogs, or websites using FIGMA in no time and without any code at all. Whether you are a beginner, web designer, app developer, entrepreneur, or freelancer, this course will allow you to learn how to design apps, blogs, and websites, and equip you with marketable skills. Another of the most useful offerings inside FIGMA is a viewer that helps a designer create responsive design using FIGMA but allows the designer to see what a design looks like in different sizes.

FIGMA FUNDAMENTALS

Introduction:

- › What is FIGMA?
- › Installing & signing up for FIGMA
- › Creating a new file
- › Importing
- › Saving your work
- › Frames
- › Spacing & Alignment
- › Groups
- › Scaling
- › Components
- › Anatomy of a FIGMA File
- › Styles

LEARN ABOUT FIGMA INTERFACE

- FIGMA Keyboard Shortcuts
- Where to find Sigma
- Browser app vs Desktop App
- The Start Screen
- Introduction to the interface
- Importing and Exporting Files
- Using Templates
- The Toolbar
- The Layers and Pages Panel
- The Assets Panel
- The Design Panel
- The Prototype Panel
- The Code Panel
- The Canvas
- Using Keyboard Shortcuts
- Working with the Version History

Setting up a New Project

- › Creating a New Project and File
- › Importing Sketch Files
- › Working with Teams
- › Working with Templates

Add and Edit Content

- › Working with Frames
- › Working with Shapes
- › Drawing Icons using the Pen Tool
- › Drawing Shapes Using the Pencil Tool
- › Working with Text
- › Masking Images and Shapes
- › Importing Icons and other Graphics
- › Working with Color
- › Working with Styles
- › Setting up Components
- › Using Constraints for Responsive Design
- › Working with Version Control

Completing the Design

- › Designing a Slide-out Menu
- › Designing an on-screen Overlay
- › Designing a comments section
- › Designing Multiple Art board States
- › Give this design its own unique personality

Prototyping, Sharing, & Exporting

- › Creating a prototype
- › Viewing your prototype on a mobile device
- › Device Preview
- › Sharing your design
- › Allowing others to comment on your design
- › Exporting graphics and assets

Advanced FIGMA Concepts

- Shapes, icons, & Neumorphic galore
- Creating icons with shapes
- Neumorphic design in FIGMA
- FIGMA Plugins
- Time-saving FIGMA Plugins
- Isometric designs, content, avatars
- FIGMA Community Features

Introduction to Draw.io

- Overview of Draw.io (diagrams.net)
- Importance of diagramming tools for business analysts and product managers
- Basic navigation and user interface
- Setting up an account & saving diagrams

Basic Features & Functions

- Creating a new diagram
- Understanding the canvas and grid
- Adding and arranging shapes
- Connecting shapes with lines and arrows
- Basic formatting and styling options
- Using layers and grouping elements

Working with Templates

- Exploring available templates
- Importing and customizing templates
- Saving custom templates for reuse

Advanced Diagramming Techniques

- Creating complex shapes and custom
- Advanced formatting: gradients, shadows, and transparency
- Using custom properties and metadata
- Working with connectors and advanced line options

Business Process Modeling

- Introduction to business process modeling
- Creating flowcharts & process diagrams
 - Symbols and notation
 - Start and end points, decision nodes, and process steps
- Modeling business processes with BPMN
 - BPMN elements: events, activities, gateways, and flows
 - Examples of BPMN diagrams

Use Case Diagrams

- Understanding use case diagrams
- Actors, use cases, and relationships
- Creating and organizing use case diagrams
- Practical examples for product managers

Data Flow Diagrams

- Introduction to data flow diagrams (DFDs)
- DFD symbols: processes, data stores, data flows, and external entities
- Creating context diagrams and level 0 DFDs
- Decomposing DFDs to detailed levels
- Practical applications in system analysis

Entity-Relationship Diagrams

- Basics of entity-relationship (ER) diagrams
- Entities, relationships, and attributes
- Types of relationships: one-to-one, one-to-many, many-to-many
- Creating ER diagrams for database design
- Practical examples in business analysis

Wireframing & Prototyping

- › Importance of wireframes and prototypes in product management
- › Basic wireframing techniques
- › Creating UI/UX mockups with Draw.io
- › Adding interactivity to wireframes
- › Collaborating on wireframes & getting feedback

Project Management & Gantt Charts

- › Introduction to project management diagrams
- › Creating Gantt charts for project planning
- › Task dependencies and milestones
- › Visualizing project timelines and progress

Collaboration and Sharing

- Collaborating with team members in real-time
- Sharing diagrams and setting permissions
- Exporting diagrams in various formats (PNG, PDF, SVG, etc.)
- Integrating Draw.io with other tools (Google Drive, Confluence, Jira, etc.)

Practical Exercises and Case Studies

- Real-world case studies for Business Analysts
 - Modeling a business process for a retail company
 - Creating an ER diagram for a customer database
 - Developing a use case diagram for a new software feature

➤ Real-world case studies for product managers

- Designing a wireframe for a mobile app
- Creating a Gantt chart for a product launch timeline
- Modeling data flow for an e-commerce platform

Tips, Tricks, and Best Practices

- Best practices for creating clear and effective diagrams
- Tips for improving productivity with Draw.io
- Common mistakes to avoid
- Resources for further learning and support

Final Project and Presentation

- Final project: Create a comprehensive diagram (or set of diagrams) based on a provided case study
- Presentation of the final project to the class
- Peer review and feedback session
